
HEELEY SURGICAL LTD

Manufacturer of Surgical Instruments

Quality without compromise

Sterile Single Use
Product List

We are a company that offer a wide range of the highest quality surgical instruments available in today's market place, in both single use and reusable form, at very competitive prices. We are constantly forward thinking, with an ultimate aim of providing a solution to your needs whilst also saving you money.

We offer a unique service where an instrument maker/engineer is willing to discuss any technical problems that you may have and, where possible, provide you with a more suitable alternative - as we realise it is not always possible to get what you want off the shelf. As a highly skilled manufacturer we are also in the fortunate position to be able to re-engineer your reusable items into single use on most occasions should the need arise.

Our single use instruments imitate their reusable equivalents. All carry the wording single use and the recognised worldwide single use logo. They can be supplied sterile or non-sterile, if supplied sterile they come double peel pouched with full traceability and a tear off ID strip to attach to the patients notes.

We are also able to assemble any size of sterile sets to suit your requirements.

All products manufactured and supplied by Heeley Surgical Ltd comply with the requirements of recognised standards; these include British, European and International quality management systems ISO 13485. All our instruments carry the CE Mark.

Our instruments are made from the highest quality materials and carry a replacement guarantee.

Managing Director, Mr Alan Heeley, has 48 years experience in surgical instrument manufacturing and design. Having been an instrument maker himself he brings an in depth knowledge and expertise to the company.

If Heeley Surgical Ltd can be of any help or service to you, or you would like to discuss any requirements you may have we would welcome the opportunity to provide you with any information or help you may require.

SAVE THE PLANET AND SAVE MONEY WITH OUR METALS RECYCLING SERVICE.

Single Use, metal surgical instruments have revolutionised day-to-day healthcare; combating infection rates and reducing costs.

However, after use most are simply discarded and treated as clinical waste with no thought to their value.

SRCL's **Metals Recycling Service** can help cut the cost of clinical waste disposal and help you to be green too.

How does it work?

- Place your single use, metal surgical items in one of our special bins
- Bins are collected on usual collection dates, minimising disruption
- Training and posters provided
- Items are process in one of our sterilisation plants*
- Rebates are available

* The sterilisation process, fully authorised by the Environment Agency, ensures that the sterilised metals can be reprocessed and converted into valueable raw materials; ready for turning into alternative items.

Instant Savings!

We estimate that metal instruments make up almost 5% of an acute hospital's clinical waste.

Treatment centres, GP's, dentists and clinics also generate significant amounts of this waste type.

Many customers ask for this material to be incinerated with tonnes of healthcare instruments sent to landfill after this process.

Sort, Segregate, Save!

By seperating these heavy and bulky items from the incineration waste stream, you can save money instantly.

Incineration weights reduce - lowering treatment costs* and you benefit from paying a lower rate for steam sterilisation of metal items.

Plus, all the metal waste recycled is diverted away from landfill, helping you meet your environmental targets too.

* **For pay-by-weight customers**

WHAT CAN BE PUT IN THE BIN?

Most kinds of metal single use instrument in accordance with local Infection Control policies and procedures

WHAT CAN'T BE PUT IN THE BIN?

**Needles and syringes
Soft clinical waste
Instruments with plastic parts
Food and drink cans or bottles
General waste**

The benefits of using “Heeley Surgical Ltd” Sterile Single Use Instruments

Information available to healthcare professionals has, in the past, offered rather mixed messages in relation to the efficiency of sterile single use surgical instruments.

Whilst presenting a very obvious solution to the time and cost involved in decontamination and sterilisation, there has also been concern in regard to their safety and cost effectiveness of sterile single use surgical instruments.

As time has passed, and sterile single use instruments have reduced in price and found a more mainstream use in a full variety of surgical procedures, the benefits can now be seen to far outweigh any possible disadvantage.

Decontamination & Sterilisation

With “Heeley Surgical Ltd” Sterile Single Use surgical instruments there is an absolute guarantee that each examination will be performed with a completely clean and sterile instrument, since the “Heeley Surgical Ltd” Sterile Single Use instruments are disposed of after each procedure.

This also eliminates the need for a lengthy and costly decontamination process as seen with reusable instruments.

In the case of a smaller surgery or clinic, use of “Heeley Surgical Ltd” Sterile Single Use surgical instruments therefore removes all of the costs and headaches associated with operating an autoclave, including adherence to compliance regulations and expenditures such as the dead time spent running decontamination cycles.

The HTM 2030 guidelines for National Decontamination mean that small practices and surgeries now have to comply with the same standards as set for Sterile Service facilities in NHS Acute Trusts, and achieving such compliance is a very significant cost in terms of both finance and manpower.

Risk Management

Managing the risk of infection and cross-infection will be high on the agenda of every healthcare professional.

The danger posed by ‘prion diseases’ such as ‘Variant Creutzfeldt-Jakob Disease’ (vCJD), and the like, is a major consideration when considering a move to Sterile Single Use surgical instruments. It is reported that the prion found in neurological tissue that infects a person with vCJD, is able to survive for up to 10 decontamination cycles, suggesting that many re-usable surgical instruments are actually being utilised in a contaminated state.

Selecting “Heeley Surgical Ltd” Sterile Single Use surgical instruments therefore reduces the risk of iatrogenic infection and provides improved peace of mind for both surgeons and healthcare managers.

All “Heeley Surgical Ltd” Sterile Single Use surgical instruments are marked with the internationally recognised logo for “Single Use” and the words Single Use, also the CE mark, in accordance with British, European and International quality management systems ISO 13485.

Anything that has this mark on it is a single use item intended for disposal after one patient use.

Instrument Traceability

Every item of the “Heeley Surgical Ltd” Sterile Single Use surgical instrument range is individually traceable all the way back to its production date and batch, with a tear off ID strip that can be placed on patients notes.

It is recommended that the ID numbers for tracerability are recorded on the patients notes. This can be useful for investigation of complications occurring after the surgery is completed.

Logistics And Supplies

Expansion of the role of GP surgeries and the development of Poly-Clinics will see an increasing number of Minor Surgery procedures being carried out in Primary Care settings.

It is essential that such centres have sufficient quantities of ready to use sterile surgical equipment, but retaining stocks of expensive reusable surgical instruments is far from cost effective.

In addition, time constraints of sending reusable surgical instruments out to regional sterilisation centres will lead to delays in procedures and last minute cancellation of lists.

Purchasing “Heeley Surgical Ltd” Sterile Single Use surgical instruments allows the clinic to manage their own supplies in line with their demand at a low cost.

Cost Allocation

With current financial constraints and an increasingly cost aware health service, it is important that the true cost of each procedure can be accurately assessed.

When opting for “**Heeley Surgical Ltd**” Sterile Single Use surgical instruments and Procedure Packs, these costs are simple and easy to calculate.

However, attributing cost when using reusable surgical instruments is seldom as accurate, as the true cost of sterilisation and instrument tracking is difficult to record, with many costs hidden in utility bills and staffing costs.

Environmental Impact

Sterile Single Use surgical instruments fall under the legal definition of clinical waste, and must be disposed of in accordance with national and European Clinical Waste regulations, which currently means that they go for incineration or landfill, raising concerns as to their environmental impact.

However it is very important to recognise that “**Heeley Surgical Ltd**” can offer an alternative to Incineration and landfill (contact us for more information).

A reusable surgical instrument has to undergo the thorough decontamination and sterilisation regime, which includes the use of large amounts of water, detergent, steam & electricity, to prepare it for re-use. In addition, there may be transport considerations if the facilities are not on site.

The environmental impact of the use of these utilities and detergents must be assessed when comparing the ecological effects of Sterile Single Use to reusable instruments.

Cost

The relative cost of using “**Heeley Surgical Ltd**” Sterile Single Use surgical instruments compares very favourably with the alternative of re-sterilisation of reusable instruments, when one considers all the overheads associated with the latter option.

Staff time, equipment maintenance, utility consumption and replacement instruments are just some of the costs associated with in-house decontamination and sterilisation, along with administration costs of instrument tracking and management.

Enforcement of the National Decontamination Strategy will only increase these expenses, as many autoclaves will need to be replaced with the latest compliant models and many buildings refurbished to allow for segregated ‘clean’ and ‘dirty’ rooms.

Conclusion

Taken on balance then, it is evident that use of “**Heeley Surgical Ltd**” Sterile Single Use surgical Instruments in place of reusable instruments will generate:

- Improved cost efficiency
- Improved clinical management
- Improved managerial peace of mind
- Improved Patient Care
- Improved Waste Reduction
- Improved Infection Control
- Reduction in CO² emissions
- Reduction in your carbon footprint
